

NEW! B6 Brass Under Battery Weights

The B6 battery weights fit perfectly under your B6 or B6D shorty LiPo batteries so that you can add weight while reducing your vehicle's center of gravity, resulting in improved handling and stability on high-grip surfaces.

Each 3.74" x 2.08" brass set contains one each of 26g (.02" thick) and 43g (.04") weights, with their numbers etched into the surface.
